Abstract of JP 60141239 (A)

PURPOSE: An ice cream container having two connected hemispherical plastic container parts, a sealing mechanism at the joining surfaces, an injection inlet on one of the hemispherical container parts and an attractive appearance sufficient for catching the eye. **CONSTITUTION:** Two respective hemispherical plastic container parts 2 and 3 having a hinge element 4 provided therebetween are integrally molded. A radial flange 5 extending along the edge of an opening of the lower container part 3 is provided in the lower container part 3, and a peripheral wall part extending downward from the outer edge of the flange 5 is provided. A knob 7 protruding from a part of the bottom edge of the peripheral wall part in the radial direction is provided. A flange 10, a peripheral wall part 11 and a knob 12 are similarly provided on the upper container part 2, and an ice cream injection inlet 18 is provided thereon.
